About Me

I'm a self-driven, enthusiastic individual that loves a challenge, having only been involved in the computer coding world for the past 6 months I have developed a passion for coding and what I lack in experience I make up for in tenacity to further my knowledge. Coming from a background of over 10 years experience in retail specialising in consumer electronics I have obtained many skills ranging from customer service to sales.

Work Experience

- **Kmart:**
Kmart was my first job after moving away from home, during my time there from 2011 to 2015 I primarily worked in the photo lab/sound and vision area selling electronics and creating a variety of photographic material (canvas, books, posters etc).
- **JB Hi Fi:**
I worked full time at JB Hi Fi from 2015 to 2020 and have experience in nearly every department but specialised in finance and gaming.
- **Cash Converters:**
I am currently employed casually as a buys and loans operator where my main purpose is to assess customers items and potentially purchase them. I have obtained a general level of knowledge across a wide range of products from power tools to jewellery.

Education

- 2010 Graduated High School from Manjimup SHS.
- 2015 Graduated from ECU with a bachelors degree in Sport Science.
- 2021 Enrolled in full stack course through BootCamp, during the course we covered many front end and back end technologies ranging from Javascript, CSS, Node, GraphQL and React. Although I found the course very challenging and fast paced it has only increased my curiosity and drive to learn more.

Interests

From a young age I have always had an interest in computers, from hardware to software I found them intriguing but my curiosity didn't fully develop until recently when I could see myself doing computer coding for the rest of my life. I come from a relatively artistic family which is where my passion for web development has stemmed from.
